

25 Business Prompt Engineering Prompts

Based on Lectures 20–21: Marketing, HR, Finance, Operations and Business Decision-Making

These prompts are designed for business problem-solving, prompt improvement, AI evaluation, and Prompt Portfolio activities. Replace bracketed text with your own information.

- **1.** Act as a marketing manager for a café near a university. Create a 7-day promotional campaign to increase weekday visits from students aged 18–24. Keep the budget below ■20,000 and present the answer in a table.
- **2.** Improve this basic prompt by adding Role, Context, Task, Constraints, Format, and Check: '[paste basic prompt]'.
- **3.** Create five marketing ideas for [business/product]. Include target audience, objective, channel, estimated cost, and expected benefit.
- **4.** Create a customer-retention strategy for an online fashion retailer experiencing low repeat purchases. Clearly identify assumptions and information that requires verification.
- **5.** Review this marketing campaign. Check whether it is suitable for the target audience, realistic within the budget, and feasible to implement: '[paste campaign]'.
- **6.** Act as an HR manager. Create eight interview questions for a Digital Marketing Intern. Assess communication, marketing knowledge, creativity, problem-solving, and teamwork.
- **7.** Review these interview questions for bias, ambiguity, repetition, or inappropriate personal questions. Suggest improved alternatives: '[paste questions]'.
- **8.** Create a training plan for new customer-service employees in an e-commerce company. Include learning objectives, topics, activities, duration, and evaluation method.
- **9.** Organize the following employee-performance information into Known Facts, Possible Assumptions, Missing Information, and Questions for the Manager: '[paste information]'.
- **10.** Based only on the information provided, create a recruitment-support plan. Do not make the final hiring decision and do not use sensitive personal information.
- **11.** Act as a financial analyst for a small café. Using only the provided figures, calculate total expenses, profit, and profit margin. Separate calculations, observations, and recommendations.
- **12.** Verify these financial calculations manually and explain each step: Revenue = [amount]; Expenses = [amounts]. Do not invent missing information.
- **13.** Analyze the following business expenses and identify three areas management could investigate for possible cost improvement. Clearly separate facts from recommendations: '[paste expenses]'.
- **14.** Create a monthly financial-summary table with Revenue, Expense Category, Amount, Total Expenses, Profit, and Profit Margin.
- **15.** Review this financial recommendation for accuracy, feasibility, cost, risk, and missing information: '[paste recommendation]'.

- **16.** Act as an operations manager for an online retailer. Analyze late deliveries, damaged packaging, wrong products, and slow refunds. Present possible causes, business impact, recommended action, and KPI in a table.
- **17.** Suggest suitable KPIs for these operational problems: late delivery, damaged products, wrong products, and slow refunds. Explain what each KPI measures.
- **18.** Create an improvement plan for delivery delays. Include possible causes, data required, corrective actions, responsible team, timeline, and KPI.
- **19.** Review this operations plan and identify which statements are facts, assumptions, or recommendations: '[paste plan]'.
- **20.** Create a prompt that asks AI to investigate a business problem without inventing operational data. Require all assumptions to be clearly labeled.
- **21.** For StyleHub, an online fashion retailer with low repeat purchases, employee-training needs, unnecessary costs, and delivery delays, create four separate AI prompts for Marketing, HR, Finance, and Operations.
- **22.** Create a cross-functional business action plan for StyleHub. Separate the responsibilities of Marketing, HR, Finance, and Operations, and identify dependencies between teams.
- **23.** Evaluate this AI-generated business recommendation using Business Relevance, Accuracy, Feasibility, Cost, Risk, Ethics, Evidence, and Human Judgment: '[paste recommendation]'.
- **24.** Create a portfolio-quality business prompt for [Marketing/HR/Finance/Operations]. Include the business problem, prompt version 1, evaluation criteria, improved prompt version 2, and final recommendation requirements.
- **25.** Create a reflection response explaining how improving a business prompt can improve the usefulness of AI output. Include one strength, one weakness, one assumption, and one item requiring verification.

Reminder: AI provides input, not the final business decision. Check calculations, identify assumptions, verify important claims, and apply human judgment before acting.
