

25 Advanced Prompt Engineering Prompts

Based on Lectures 18–19: Constraints, Structured Output, Prompt Chaining, Refinement and Verification

These prompts are designed for business and academic practice. Replace bracketed text with your own information.

- **1.** Act as a marketing manager. Create five campaign ideas for [business/product]. Include the target audience, objective, estimated cost, and expected benefit.
- **2.** Improve this basic prompt by adding role, context, task, constraints, and output format: '[paste basic prompt]'.
- **3.** Create exactly five recommendations for [business problem]. Use simple language and keep the total response under 150 words.
- **4.** Suggest three marketing strategies for a college café. Each strategy must cost less than ■5,000 and target students aged 18–24.
- **5.** Analyze the following customer complaints and organize them in a table with Complaint Category, Main Issue, Business Impact, and Recommended Action: [paste complaints].
- **6.** Convert the following unstructured information into a comparison matrix with clear headings: [paste information].
- **7.** Create a seven-day action plan for [business objective]. Present it in a table with Day, Activity, Responsible Person, and Expected Outcome.
- **8.** Break this complex business task into five connected prompts using Prompt Chaining: '[describe task]'. Explain what output from each step becomes input for the next.
- **9.** For an affordable fitness app, identify three customer segments, describe each segment, and suggest the most relevant information needed before selecting a target segment.
- **10.** Using the customer segments below, select a suitable segment based only on the information provided. State assumptions separately: [paste segments].
- **11.** Create three promotional strategies for the selected target segment. Include objective, channel, message, budget, and success measure.
- **12.** Create a 7-day social-media content plan for this campaign. Include platform, post idea, caption direction, call-to-action, and posting day.
- **13.** Summarize the final campaign for a management presentation in five bullet points. Use only the information provided.
- **14.** Refine this response for college students aged 18–24: '[paste previous AI response]'.
- **15.** Revise the following plan so that the total budget is below ■20,000 and only Instagram and WhatsApp are used: '[paste plan]'.
- **16.** Review your previous recommendation. Identify three weaknesses, unrealistic assumptions, or missing factors, then revise the recommendation.

- **17.** Analyze this request and separate the answer into Known Facts, Assumptions, Questions Requiring More Data, and Recommendations: '[paste scenario]'.
- **18.** Answer the following question using only the information provided. If information is missing, write 'Information not provided': '[paste question and data]'.
- **19.** Review this AI-generated response for possible hallucinations, invented figures, unsupported claims, or misleading statements: '[paste response]'.
- **20.** For every factual claim in the following response, identify what source or evidence would be needed to verify it: '[paste response]'.
- **21.** Check this citation or source claim. Explain what should be verified, including whether the source exists, is reliable, current, and actually supports the claim: '[paste citation or claim]'.
- **22.** Create a prompt that asks AI to summarize market information without inventing market-size figures or sales numbers. Require separate sections for facts, assumptions, recommendations, and further research.
- **23.** Create a strong business prompt using this template: Role, Context, Task, Constraints, Output Format, Evidence Requirement. Topic: [insert business topic].
- **24.** Create a Prompt Portfolio entry for a Prompt Chaining exercise. Include the business problem, prompts, outputs, improvements, and final reflection.
- **25.** Create a Prompt Portfolio entry for a hallucination and verification exercise. Include the question, AI claim, source, verification steps, findings, corrected information, and learning reflection.

Reminder: Constraints improve control, but AI output still requires human review. Verify important factual claims and clearly separate facts, assumptions, and recommendations.
